ASUS WL-500gP V2 Wireless Router Utilities consists of three applications: Discovery (launches a network discovery routine), Settings (performs a device configuration routine) and Restore (unloads the system firmware). It is a standalone application and does not require the use of Setup (to be found in the [SETUP] section of the website). The search interface supports two searches: A broad search for all the devices found in the WLAN, and a more precise search using the SSID or

---

the manufacturer name of the device. The application can run in two different modes: As a standalone application and as a part of ASUS WL-500gP V2 wireless router. It is possible to run all the actions from within the Setup program, or to launch each action from within the Utilities program. The goal of the application is to allow for the fastest device setup, regardless of the operating system. All the steps are executed directly on the router, with no need to interact with a computer. Features: The application can be run in three modes: as a standalone
