friends, I'm excited to announce that we've rolled out a new version of ProtonVPN
that, for the first time, includes both OpenVPN and ProtonVPN as options for our
users. The update will be available soon to our Android users and we hope to have
our iOS users next. Before we start, let's explain how we choose which encryption
protocols we support. Most VPN apps that claim to provide multiple protocols
offer only a handful of them, limiting their usefulness and potential users. In

contrast, ProtonVPN is the only VPN provider offering comprehensive support for all available protocols and modes, allowing you to connect to any server on our network. In a nutshell, our goal is to become the go-to VPN provider for the entire range of Internet services available to people around the world.

Protocols vs Modes

ProtonVPN uses a combination of two types of encryption: **Protocols** – This refers to the overall protocol that is being used for encryption and it is how the data is encrypted at the network level – **Modes** – This refers to the individual encryption options available to you on the encrypted channel. Generally speaking, protocols are preferred over modes for various reasons. First, protocols are automatically encrypted, meaning that the mode is automatically chosen based on what is available on the connection. For example, when connecting to OpenVPN, we will always use the AES-256 cipher by default, even if the connection has a 256-bit TLS cipher set. Additionally, protocols are used when we actually send data over the encrypted connection, while modes are used only for initialization and authentication. As you'll see below, we use AES-256-CBC for OpenVPN and AES-256-GCM for ProtonVPN, along with various other encryption types. AutoCAD

Open Autodesk Autocad Go to File>Open>file A dialog box should open up with a list of your Autocad files. Select the package that you have just downloaded and click Open. Locate the file called autocad.reg or autocad_autocad.reg Right click it and select Edit Copy the text that says

HKEY_CURRENT_USER\Software\Autodesk\AutoCAD\13.0\Autocad.reg It should look like this

HKEY_CURRENT_USER\Software\Autodesk\AutoCAD\13.0\Autocad.reg SOFTWARE\Autodesk\AutoCAD\13.0\Autocad.reg Place this text on your desktop and we're going to use it to log into Autocad on your computer. Open up Notepad and paste this line of code.

HKEY_CURRENT_USER\Software\Autodesk\AutoCAD\13.0\Autocad.reg Save the file as autocad.reg Go back to Autodesk Autocad Click Open>File>Open and navigate to where you saved the autocad.reg file NOTE: Save all the files, including autocad.reg into the same folder or else we won't be able to work with this Open the folder and double click the autocad.reg file Click Yes You should now have the option to log into Autocad using your user name and password.

Click OK to close the Autocad window That's it. You're done! Let's see what you can do. Step 1 Open the Autocad application Open your favourite Autocad application Step 2 Work on your design Open an empty design from your Autocad folder Step 3 Export your design Select a work plane and make sure that it's the same as you have in the template file. Go to File>Export AutoCAD Package Select the Destination file and save it. Step 4 Import your design Navigate to the location of the newly saved file you exported and double click to open it. Select

Load AutoCAD Package Select the file that you exported and click OK

What's New in the AutoCAD?

Create itineraries and overviews for routings: Create detailed routing of your drawings. AutoCAD's Route, Master and PDF Print with Route Profiles make it easy to create a routable drawing. PDF Print with Routes makes it easy to create a PDF drawing that can be sent to a company that prints and then manually routes to bring your drawing to life. (video: 1:31 min.) Drag and drop, Xref and direct call: With AutoCAD 2023's new Drag and Drop functionality, no more need to insert a drawing from another source and then "Edit and select". With drag and drop you can start with a 3D object such as a part and quickly select and align it to another drawing. SketchUp and Inventor continue to be available in the default start menu. AutoCAD is always the first choice for most designers and engineers, but in 2020, AutoCAD is also becoming a first choice for architects, planners and interior designers who are increasingly turning to 3D software to do their work. (video: 1:40 min.) Multi-CAD users can also now use AutoCAD to create and edit a BIM model from Revit, ArchiCAD or SketchUp. (video: 1:24 min.) New: in-place edit tool and graphical history When editing your drawing, don't be frustrated by having to close and reopen it to continue working. Now in-place editing is ready to go at all times and can be used to edit without having to create a new drawing document. (video: 2:05 min.) See and control all your annotations at once: Give the user feedback on the annotations they have created without having to separate or delete them. The graphical history, along with the changes applied by the user, is now available at all times, even when not hovering. Select all: With the new Select All functionality, you can select all the objects in your drawing without

having to select one at a time. Save and edit bitmap images of your drawing: Save your image files as .bmp, .png, .jpg, .tif, .tiff and .eps formats. From a library with images to a specific folder on your hard drive, you can manage and edit all of your drawings at once
