## Big Meter Pro [Mac/Win] (Latest)

Free System Resource Monitor turns your desktop into a powerful resource monitoring tool which tracks CPU, RAM and disk usage. Over the years, programs and files in use in your computer can cause an exhausting drain on all kinds of resources. While some programs are idle by design, others, such as the humble disk defragmenter, can still eat up disk space at a rapid rate. Another area where you can use all your computer's CPU cycles is graphics rendering. If you have an older Windows 95/98/NT version you may want to always run Big Monitor in background to keep the taskbar up to date. Big Monitor is simple to use. You just select from a list of resources on which to monitor (CPU, RAM, Disk, Network I/O and Disk I/O). Advanced users can also monitor all four of these in more detail. You can set alerts on levels of resource usage and time for usage. There's lots more to monitor: physical memory, number of processes, disk free space etc. \* BIG MONITOR has been bundled with PC Tools updates since 1998 as SYSTEM MONITOR on the PC Tools IDE and Freeware updates. \* Always available: No special setup, no setup. There's nothing to install and you don't need to be online to use Big Monitor. \* Easy to use: You don't need to be a system administrator to monitor your system resources. Simply select resources you want to monitor and set the alert level, time, change settings, or terminate. \* Automatic scheduling: Manage resources with one click of the mouse. Big Monitor can be set up to monitor the resources and restart the applications which are using the most CPU, RAM or disk space. \* Easy to uninstall: Uninstall Big Monitor like any other program from your start menu. Unlike many other utilities, there is no uninstall procedure to confirm. Big Monitor simply goes away. \* Subscription fee automatically charged: A one-time fee is charged for using the program. You are automatically billed yearly for the use of the program. If you don't use it for the duration of the year, you pay nothing. \* Privacy Policy: No personal information will be gathered or transmitted. It will not spy on you. \* Media Size: 10.7MB \* Compatible with Windows 2000/XP/Vista/W7: NO. Based on the self-service updates from the BUGCHECK.EXE from the bundled PC Tools. System Requirements: 09e8f5149f

## What's New In?

How much space does the content you are about to upload take up? Big MetaBox Pro is a tool that you can use to measure the free disk space that you're about to receive. This tool is also able to answer other important questions such as how much space will be needed to compress files and how many files will be needed to compress. Unfortunately, Big MetaBox Pro doesn't support other file formats such as MP3, MP4, WMV or DVD files, though. It is nevertheless still possible to measure the space that your files will use up, and therefore, you'll know beforehand how many files you'll need to upload. Another thing to note is that the tool can be launched from within explorer. Another possible way of using this tool is to view several files at once. It's possible to do this by right-clicking on a file, select the "Show Size" option and then press the "OK" button. The program can also be used as a file compression tool. It will give you an option when you press the "OK" button, which is to compress files. The process is not automatic though, and it is up to you to choose what folders and files you want to compress. One more interesting feature is that you can change the interval between the lines when the file's size changes. You can define a fixed interval, or you can use the trial and error method and let the program find the optimal size of the lines. Additionally, you can choose whether a line should be represented by the percent (%) of the file's total size, the size in MB, GB or any other unit you want. Thanks to the "Items List" feature, you can choose to see the content of your files sorted by their size, or in any other way. You can also choose whether the compression level should be automatic or custom. You can also set the unit of measure for the files, as well as the folder you want to compress. Speaking of units, Big MetaBox Pro is able to show files that are bigger than 10 GB, making sure you don't have to worry about an extra GB or two. The best thing is that this tool is able to be launched from within explorer. Big MetaBox Pro Free Version: How much space does the content you are about to upload take up? Big MetaBox Pro is a tool that you
