
HACK EPSXe 1.8.0 Bios Plugin Collection

Here's my problem - I'm using ePSXe 1.9 with Pete's OpenGL 2.9 gpu plugin and I'm running into some weird slowdowns. Why strange? Well, the games work fine... except in this particular case. I have a 16 MB game resource that I receive via ePSXe. I use it to make some adjustments that affect

the quality of the graphics in the game, such as anti-aliasing, etc. If I just open it via ePSXe, I get full speed, as if I was playing the game with the graphics turned on. However, if I do it via OpenGL (in window or fullscreen), it doesn't. It slows down the game and I can't figure out why. Really.
