Then I came across a link to and found this app. I downloaded it. It was in english and it worked. I had some trouble identifying specific voices to use and you can choose the kind of voice (male, female, child, etc.)... I ended up choosing the Female account. It worked! I was able to upload a.txt file and just type in any words I wanted. It was very easy to use. But the sound quality was not that good and it had a very high pitch. The text-to-speech sound quality in the Half Life files is great! In fact, when I first downloaded the first.txt file, I couldn't believe how clear and low-pitch it was. Even though the quality was not great the overall tone of it was incredible. I decided to take a look at the source code because I was hoping to be able to modify the

source code to make the voice lower pitched and sound clearer. I ended up finding the .vo file of the announcer from Half-Life 1 and found the .vox recording I was looking for! If you look at the source code you will find some lines that you can edit to lower the pitch (see below). source code: VOX Example Text To Speech Importing a .vox file in Audacity Audacity Source Code Sep 9, 2014 I have heard of people "splitting up" the text-to-speech program from their game's announcement system (Black Mesa' case).
