Antimicro X64 [March-2022]

★Beautiful, easy to use and intuitive interface.★Terrific support for all models of gaming controllers.★Very powerful antimicro is a lightweight piece of software designed to help you map keyboard and mouse actions to a joystick or gamepad and hence, make sure you have faster reactions in the various games you play on your computer. Assign keys to gamepad buttons effortlessly Before you can get started, you need to connect your joystick or gamepad to the computer, a connection that can be either wireless or via a USB cable. In case the application does not view the device you just connected, then hitting the Update Joystick function or running the tool with Administrator privileges can solve the problem. Functionality-wise, the utility is as simple to use as it looks. Therefore, you can make a mapping by highlighting the mapping cell for the appropriate button row in the dedicated window. Afterwards, simply press the desired button or move the axis of your gamepad for the change to take effect. Test the new mapping in the user-friendly GUI The program comes with a clean and intuitive interface that is unlikely to give you any troubles, regardless of your experience with similar applications. In fact, the interface consists of the main window that allows you to preview the current mapping and a secondary panel where you assign the keys. Once the keys are assigned, you can preview them in the main window and perform a small test to determine whether the mapping is performed correctly. The test entails that you move the desired button on your joystick or gamepad and notice if the corresponding button is highlighted in the UI. A handy tool for remapping standard keys to gamepads In the eventuality that you are looking for a means to improve your reactions in the various games you are playing on your computer, then antimicro provides you with a quick way to remap your mouse and keyboard buttons to your favorite gamepad. antimicro Description: ★Beautiful, easy to use and intuitive interface.★Terrific support for all models of gaming controllers.★Very powerful Loop buttonIWS2 supports the new HID information that has been added to the drivers.
