✗ *Monitor the network traffic* ✗ *Control the audio player* ✗ *Monitor the battery status* ✗ *Monitor the CPU, RAM and disk usage* ✗ *Access frequently used applications* ✗ *Take notes* ✗ *Stay up to date with the latest news* ✗ *View the weather forecast* ✗ *Access Gmail, Facebook or Twitter* ✗ *Control the heat or cooling* ✗ *Use the scanner* ✗ *Listen to the world news* ✗ *Display the current time* ✗ *Control the lock screen* ✗ *Use the calculator* ✗ *Use the LED light* ✗ *Enable or disable notifications* ✗ *Control the Wi-Fi password* ✗ *Monitor the Wi-Fi network* ✗ *Monitor device health* ✗ *Monitor the trackpad* ✗ *Monitor the keyboard* ✗ *Monitor the lid* ✗ *Use the mouse* ✗ *Use the camera* Rainify can use just about any

module you can find on the web. There's not a lot of documentation available as it's an add-on for Rainmeter. Quick Notes: Screenshots: Download Link: Help: The Reading Trolley is a delightfully simple application with the main objective of providing users the ability to read and interact with the web while they are on the go. The application is intended for those who like to browse the web while in transit, and in particular, while on the train. The main objective is to provide a more pleasurable browsing experience on the mobile web, as opposed to a clunky app. The application is designed to mimic the behaviour of a physical trolley which moves along the tracks on the internet, and so it is meant to be a floating, interactive and intuitive control of the user's web browsing experience. The application can browse virtually any website, be it for news,

- Monitor CPU, RAM, network, disk, battery status and weather - stay up to date with the latest news using the feed reader - access Google, Facebook, Twitter, Gmail, Opera, iTunes or other mail clients - the application supports all major browsers and monitors the window sizes and number of tabs (up to 10) - optionally view detailed information about the system or quickly access frequently used applications - the application can monitor any application by starting the application's installer and automatically collecting information about that application, including the latest version information - view the full history of actions performed on an application - optionally bring back any running application to the front - install and uninstall applications, create shortcuts or scripts and move applications to the

Favorites - optionally adjust the font and font size - optionally adjust the application icon's color - optionally display the weather forecast - optionally display your "Last Activity" on selected applications - optionally mark selected applications as read (red dot) - add external gadgets to the Rainify gadget list - optionally add gadgets to the Rainify bottom panel - easily move gadgets between panels - easily remove gadgets from panels - optionally display the quick launch or "Hamburger" menu - optionally display the application menu

Quick Notes

Slideshow Quick Notes Slideshow Description:
