Markup Assist: Now you can make AutoCAD display and share your work on mobile devices. Use AutoCAD on your iPad, iPhone or Android tablet, or the Web app to share your design with clients. (video: 1:30 min.) **Chart of Visual Styles** You can create a chart of all your visual styles for the user to quickly browse. You can also assign a visual style to any of your drawings automatically. (video: 1:15 min.) **Drawing Controllers:** Reduce the clutter in your drawing windows with new drawing controllers. In the drawing window, the drawing controller automatically highlights your active layer, your active dimension, your active UCS, and any currently active drawing region. This makes it easy for you to keep working while the drawing window is active. You can also drag and drop drawing controllers anywhere in the drawing window. (video: 1:15 min.) **CAD-specific commands:** You can use the new CAD-specific commands to access common tasks with greater efficiency. To specify the dimensions of a line to the nearest decimal, use the eDimensiontoLine command instead of specifying every number. The new axes command lets you create multiple drawings on the same sheet of paper, while the new commands for creating text block and text box content let you add text, dimensions, and other types of content in new formats. (video: 1:15 min.) **Easier Dimensioning:** You can control how dimensioning is handled by the Dimension Preview window, or by the dimensions themselves. New commands let you specify a custom height for the text of your dimensions, and create your own new dimension types. (video: 1:15 min.) **Faster Page Setup:** You can set your printer's margins, paper orientation, and page setup for sheets within a drawing file, all at once. This makes it easy for you to set up multiple sheets in a single drawing file. You can also find and replace any text, dimensions, and linetypes with new hotkeys. (video: 1:15 min.) **Tables and Lists:** You can create new table types and define custom columns, headers, borders, and row and

column styles. You can add information to the tabular data in your drawing and use tables to document designs in other ways. (video: 1:15 min.) Symbol Animation and Dynamic Input:
