===== h2incx does not make any assumptions about header file semantics. It uses 2 mechanisms to determine what to do with the #include lines in the header file: 1. The name of the header file can be matched with the name of the object file. This is used by default if there is no other matching rule for the included header file. 2. The internal constant h2inc_include_handler may be set to true. In that case, the search will start from the beginning of the include file and continue as long as is necessary to find a matching include file. Installation: ===== h2incx is available through win32 installer. Compile/Install: ===== To compile, just run the command line: h2incx /bin To install, just run the command line: h2incx /bin /s You will be asked a few questions, set them up as you wish. Examples: ===== Just grab the included files from the command line: h2incx Just grab the include file from the current directory: h2incx myfile.h h2incx is like Unix's grep program: h2incx *.h | grep string or: h2incx all.h | grep string Or match a file name in a file: h2incx include/foo.h | grep string If you know the file name and you want a result in a text file, you can do h2incx foo.h > results If you want to write to a file, use the /o switch to specify the out file. Use h2incx foo.h /out filename to specify the file and write the results to the specified file. Usage: ===== Usage: h2incx [options] [input files] Options: -le strip #undefs from the output -3f strip #ifdefs from the output -5c strip #elifs from the output -c compress the output using compress -d use default values for 09e8f5149f

H2incx Crack

----- The h2incx utility converts the Win32 header files to include files suitable for use in Masm based C compilers. Usage ----- h2incx path-to-headers\include destination-path -s -32 In: - path-to-headers = The path to the original header files. - destination-path = The path to where h2incx should create the include files. - s = Process just the source files - 32 = Use SSE intrinsics to convert the objects if available. Out: - If there was a failure, it will print the error message. - If the conversion was successful, it will create the included files in the destination-path. Examples: ----- h2incx "/c/windows/win32.h" "/c/windows/include.asm" "/c/windows/win32.asm" NOTE: ----- For files that are already in include format (like the those included with Visual Studio), those will not be converted. How To: ----- See the header files documentation for how to use the Win32 headers. Licence ----- h2incx is Copyright (c) 2002,2004 Mikolaj Zalewski. This software is licensed under the Lesser GNU General Public License. History ----- h2incx was originally written in 1999 to allow me to write a compiler for a new C-like language I developed using the Robin Barker framework (the predecessor to IDA Pro) called "Swift". The original version was written in Masm. As Swift never became a major language, the compiler never became a success. It also never became multi-platform, so the compiler only worked on Windows. So it is time to make the compiler work on other platforms. This led to my discovery of the Win32 platform, which looked much more like a C platform than the Windows platform. So, h2incx was written. It is basically a simple utility to convert the header files. Later I released version 1.0 of h2incx on the Swift2-32 website. This version was a monolithic Win32 DOS program. I have since turned h2incx into a Win32 console application and I've also included
