Description of the Prior Art Japanese Unexamined Patent Publication No. 23007/1982 discloses vinylcyclopropylcarboxylate derivatives represented by the following formula ##STR2## wherein X represents a halogen atom, an alkyl, aryl or heterocyclic group and each of R.sup.1, R.sup.2, R.sup.3, R.sup.4 and R.sup.5, independently of one another, represents a hydrogen atom, a lower alkyl, phenyl or benzyl group. In Examples of said patent publication, methyl vinylcyclopropylcarboxylate is prepared by reacting vinyl chloride with carbon monoxide and dimethyl malonate or dibutyl malonate. The reaction product contains unreacted vinyl chloride, dimethyl or dibutyl malonate and

malonic acid as by-products and, hence, is in a poor yield. This is an unfavorable point when the vinyl chloride is used as a starting material in a large scale industrial operation. Japanese Unexamined Patent Publication No. 32637/1982 discloses a process for preparing vinylcyclohexane derivatives. Said process comprises reacting ethylene
