Nostalgia.fm uses a secret algorithm to connect your listening history with songs from years past to present, and create playlists of the songs that you loved when they were new. Which Radio Format You Want? Automatic - Many tracks will be suggested to you. Alternative - Much better than the previous "radio-like" automatic selection. Many tracks are still selected, but each track has to match two or more of your preferences. Classic Alternative - All of the previous (and some new) alternative tracks are suggested. Classic Rock - Tracks from the 80s to the 90s that you liked when you were younger are suggested. Classic Pop - Tracks that you liked when you were younger. Dance - Tracks from the 80s to the 90s that you liked when you were younger. Disco - Tracks from the 70s to the 90s that you liked when you were younger. Easy Listening - Tracks that you liked when you were younger. Folk - Tracks from the 80s to the 90s that you liked when you were younger. Funk - Tracks that you liked when you were younger. Happy - Songs that you liked when you were younger. House - Tracks from the 80s to the 90s that you liked when you were younger. Jazz - Tracks that you liked when you were younger. Krautrock - Tracks that you liked when you were younger. Metal - Tracks that you liked when you were younger. New Wave - Tracks that you liked when you were younger. New Age - Tracks that you liked when you were younger. Pop - Tracks that you liked when you were younger. R&B - Tracks that you liked when you were younger. Rap - Tracks that you liked when you were younger. Reggae - Tracks that you liked when you were younger. Rock 'N' Roll - Tracks that you liked when you were younger. Techno - Tracks that you liked when you were younger. World - Tracks that you liked when you were younger. Please Note: Nostalgia.fm cannot guarantee to play every song on your station, but it will play as many as it can. App of the Day Download the Nostalgia.FM application for free! If you like this application, please consider purchasing it.

I also appreciate feedbacks and bug reports. Friday, November 7, 2014 WebDesign: A service providing web development from the perspective of the audience. 1.0.0 : Name service 1.0.1 : Create Web Design document 1.0.2 : Create design and store it 1.0.3 : Maintenance 1.0.4 : Modify Design document 1.0.5 : Confirm the integrity and stability 1.0.6 : Report the errors, needs-changes to the stakeholders. 1.1.0 : The site is divided into 3 parts: the home page and a few others 1.2.0 : To be migrated to Rails 3 and improve the performance of the design and application. 1.2.1 : The page will include the admin (77a5ca646e

Based on the Hack Day project Nostalgia.fm, the Nostalgia.fm application allows you to create "playlists" of songs you've listened to over the course of a year. This could be a tracklist of songs you listened to in the last week, or it could be a tracklist of all the songs you listened to on your car radio in 2006. Why this is cool: With Nostalgia.fm, you can create a "playlist" of any year in your listening history. So if you want to relive the year you listened to the best songs in the world, you can! Features: - Create and edit playlists of songs you've listened to over the course of a year - See your favorites - Get a list of what you don't like - Go to a specific year in your listening history - View playlists of songs you listened to in the last week - View playlists of songs you listened to over the course of the year - Create playlists of songs you want to listen to in the future

RescueAgent is a Last.fm client for the iPhone. It allows you to sync your Last.fm account with your iPhone contacts so that you can view your listening history and other Last.fm features directly from your iPhone contacts. Description: RescueAgent is a Last.fm client for the iPhone. It allows you to sync your Last.fm account with your iPhone contacts so that you can view your listening history and other Last.fm features directly from your iPhone contacts. Why this is cool: RescueAgent can be used to easily view your listening history and other Last.fm features directly from your iPhone contacts. You don't need to enter Last.fm's web page - it's all here. Features: - View your Last.fm profile and listening history - View your playlists, browse and search for new music - Import your friends' playlists, photos, and favorite artists - View your iTunes playlists - View your iPod playlists - Browse your playlists by category - Get a list of your top artists - Add new songs to your playlists - Get recommendations for new songs and artists - Browse playlists of other users - Get a list of your friends' playlists - Import playlists of other Last.fm users - Follow friends and get recommendations Last.fm Hack Day. Create music playlists based

What's New in the Nostalgia.FM?

Listening back over the years, there are many songs that you always sing, or always hum, and just never know what exactly you are singing or humming. The Nostalgia.FM application is your nostalgia detector, but instead of detecting a song's title, it detects the time period the song was released in. This makes finding songs to listen to a lot more fun, because you can listen to those old favorites with fresh ears. This application is based on an app called "Melodrama", which has been used as a musical instrument in many Hackathons, and the code was forked on GitHub. Download Using the app: You can start listening to a playlist by simply double-clicking on the.flac file you want to listen to, or by downloading the whole playlist to your device, or using the simple "Add" button. When you are listening to a playlist, pressing the button on the bottom right of the screen will add a song to a queue you can listen to next. You can always return to the previously added songs by pressing the "Return" button. Tuning the app: Unfortunately, the app has no built-in way to configure your music player. Instead, you will need to open the application Settings to set the default application to play your music in. Quicktime, WMP, iTunes, and Grooveshark are a few apps that can be configured through these settings. The Prefer Listening to Dynamic Playlists option will automatically switch the app to listening to songs based on the most recent songs added to a playlist. If you wish to control the app using a remote control, you can use the QtRemote example app. FAQ Q: How do I add more songs? A: You can add more songs to a playlist by double-clicking on the.flac file you want to add to the playlist. Q: How do I add songs to a playlist? A: You can add songs to a playlist by pressing the button on the bottom right of the screen. Q: How do I return to a song I played previously? A: You can return to a song you played previously by pressing the Return button on the bottom right of the screen. Q: How do I delete a song from a playlist? A: You can delete songs from a playlist by double-clicking on the.flac file you want to delete, and the song will be deleted. Q: What is the difference between the Simple playlist and the Dynamic playlist? A: The Simple playlist will always play through the most recently added songs to a playlist. The Dynamic playlist will play through the most recently added songs to a playlist, then switch
