Q3huffdecenc Activator

Q3huffdecenc is a program for compressing the packets that are stored in the Q3 "connect" files. You can do this to reduce the download size. The current release version 1.1.3 works with Q3: versions r71, r72, r73 and r74. Installation: Make sure you have .NET 2.0 or higher installed. Download the package from here and unpack it. For an explanation on how to run the application, read the instructions in the Readme.txt file About the current release: Q3huffdecenc is currently in the testing phase. It does not work correctly with all combinations of "q3" and "pc"

files. It also misses some packets. However, I was able to compress over 40% of the "connect" packets into 3-5 kB compressed files. So I am happy with the current results. I would like to hear some feedback about this product. Have fun. E-mail me with any questions, suggestions or bugs you encounter. Mail me at:

What's New In?

Q3huffdecenc (Quake 3 Huff Decompressor) is a command line tool that can decompress Quake 3 files containing "connect" packets (made by a Mod called Q3Huff, by Garret Minkowski). It can either decompress "*.q3" files or "*.q3c" files. The Q3huffdecenc is a basic decompressor that can be used in small projects or for private use. The decompression speed is not very fast, even if it is working on 64k of compressed data. There are a lot of optimizations possible. To decompress files from an attached file or standard input use the "f" parameter. For example: "c:\mysource\my.q3 -f q3huffdecenc.exe my.q3"
"q3huffdecenc.exe my.q3" "cat my.q3 |

`q3huffdecenc.exe -f >my.q3"` For decompressing compressed files from standard input use the "g" parameter.
