History AutoCAD was the first commercial CAD program to use the same graphics language as CAD programs written in assembly language. AutoCAD had a predecessor, called Microcad, which debuted on the Apple II in 1978. However, it was a batch processing application, and was used mainly by draftsmen for line drawings and specifications. The original version was designed for the Apple II, with later versions available for other microcomputer platforms. Its most successful competitors were MicroStation and Topcon CIM, which were developed by the same company, LandIS. These programs could generate and edit specifications on a design station using a graphics terminal. The first version of AutoCAD used the same graphics language, called Type 3, as Microstation. This led to many rivalries and legal cases between the two companies. The first public demonstration of AutoCAD was at the 1982 AFIPS Spring Meeting. AutoCAD's predecessor was not available on the Macintosh and it was only made available to users of AutoCAD for a time. In 1992, a version of AutoCAD for the Macintosh, AutoCAD LT, was created and adopted as the default version for non-Macintosh users. AutoCAD LT was a completely different program from the original version of AutoCAD. AutoCAD LT did not use the same graphics language as the original AutoCAD. In 1995, the original AutoCAD was updated for use with a Windows 3.x operating system. This version also introduced the first version of AutoCAD to use a cursor as a user interface. AutoCAD was first introduced in 1984, as AutoCAD 1987, with the original AutoCAD not coming out until 1992. There have been many other small upgrades over the years to the initial AutoCAD version 1, most of which were minor. In 2011, AutoCAD 2015 was released as a major update. In 2014, AutoCAD 2016 was released as a major upgrade. How does AutoCAD work? The most basic concept in AutoCAD is that of a command. Commands are commands such as "Move 1/32 in", "Circle", "Circle Center", "3D Model", and "Select All". Commands are designed to automate
