Prices are updated every 15 seconds, please refresh the page to see how price has changed recently.Q: Bash to be run from a script that is able to call a Python program using subprocess.Popen In Bash, I have a script: `#!/bin/bash for i in {1..10} do python /home/t/test/test.py python /home/t/test/test.py done` In the Python file `/home/t/test/test.py`, I have: `#!/usr/bin/python3 import sys import subprocess for i in range(1, 11): print(i) print("subprocess") subprocess.Popen(['python', '-c', 'import random; print(random.randint(1, 11))'])` I have been receiving an error as such: `Traceback (most recent call last): File "/home/t/test/test.py", line 1, in import subprocess ImportError: No module named subprocess` However, I am able to run the Python file without any issues in Bash. I am trying to get this Bash script to run for a set number of times, but need to be able to call the Python file. How can I resolve the error so that I can call the Python file within the Bash script? A:

System Requirements:

Adobe Air 2.5+ (SDK 2.5+) Mac OS X 10.5+ Mac OS X 10.6+ Windows 7+ Windows XP (with proper graphics drivers) Intel Mac (required for many apps) For most apps, you do not need to run the simulator to use them. Simply run the app on your computer and test in your browser. Supported Browser: Downloading Adobe AIR App SDK The App SDK consists of an ActionScript based SDK and a native extensions layer
