Share edits in the same way as other objects. Send shared objects and see the changes in your drawing in a matter of seconds. Consolidate complex families of objects into one, with only one AutoLISP source file. (video: 1:23 min.) * All changes, including the navigation, text, and hyperlinks, in the imported and shared objects appear on the drawing. Planning: * Start with a template for your drawings. The template makes it possible to add, change, and remove major elements at your convenience. * Use the custom properties to organize your drawings. Set up properties for each major element in your drawing. * Use AutoLISP to store and find your elements. Miscellaneous: * Gain control of what data gets saved to drawings, without needing to edit an.ini file. * Choose from four different styles and seven different colors for the ribbon icons, for the ribbon and command buttons, and for the various views. * Customize any drawing view, whether it's the command line or the status bar. * Customize custom tabs for frequently used commands. You can also put a custom message into a tooltip. * Quickly switch between 2D and 3D, and preview both in the same drawing. * Import and export objects from and to DWG files. * Choose between P4D and BIML. The BIML import and export works with the following drawing formats: DWG, PDF, SVG, DXF, and PPDF. * Import both object types from SVG files. * Fully customize your drawings. You can choose from many different drawing standards, including both 2D and 3D. * Take your drawings to the next level with interactivity and custom tags. * Share drawings with other people. Customization options: * Customize the ribbon with a powerful tree view. * Customize the main toolbar to suit your needs. * Reorder toolbars, control bars, and a dozen other main view elements. * Use full screen view or single window views. * Use the tools in three different layout modes: menu mode, side bar mode, and quick launch bar mode. * Customize
