Step 1. Create a new drawing with a simple box in a landscape view with a text. Step 2. In the properties of the box, set the thickness to 1.0 inch. Step 3. Create another box in a landscape view, but place it within the dimensions of the first box. If you want to see the result, go to the top-right panel of the main menu and select "Edit > Add to viewport". Step 4. In the second box, set the distance between objects to 1.0. Step 5. Using the method of editing the parameters of the box that you just created, move to the properties of the box. In the corners of the box, click Edit > Parameters > Edges > Points. Step 6. Now you can change the parameters of the box according to your needs, in this case we will use only the location of the first point and the number of points. Step 7. Click Ok. Step 8. Now go to the menu and select Edit > Snapping Tools > Offset. In the dialog box, set the number of offset lines to 2. Step 9. Click Ok. Step 10. After you set the parameters you want, you can save the new box in the same viewport that you selected. Step 11. Close the application. Step 12. You can open the file you have saved in the same viewport and check it to see that all the work you have done has been applied correctly. Step 13. Now that you know how to create the parameters of an object, you can create and modify the parameters of any object in a drawing. Step 14. You can check the work that you have created in any viewport, by selecting the folder Viewport> Open > Viewport> Show>. Step 15. You can also save the changes that you have made using the Viewport Properties window. Step 16. In the same viewport, you can close the window and make the changes that you want to see with the complete dimensions and size of the object. Step 17. Also, when the box or objects you have created appear too large for the viewport in which you are working, you can save them in another viewport. Step 18.
