In order to better support the system, we have introduced new features such as “Battle Spirits”. ■ New Battle Spirits On the battlefield, real time battle battles will be realized using the new Battle Spirits that you can create with your own characters. The Battle Spirit form is a new system that allows you to make the Battle Spirit produce effects by adding your Battle Spirit Ability, and then use the Battle Spirit Ability to attack the enemy. ■ Vast World You will be able to enjoy an open world, which provides endless opportunities. As you travel, the excitement and immersion will steadily increase as new dungeons and content are unlocked. ■ Adventure World In addition to the open world, there will be an Adventure

In order to change the world, they will seek to master chaos by gathering power from places that have been distorted. In the Chaos World, you will encounter apparitions, abnormal monsters, and ancient items. The Chaos World, combined with the Adventure World, creates the Scenario Board where you can use elements found in the Chaos World to prepare the scenario that you desire. ■ Collectable Contents As you go about your adventure, you can collect legendary items, ranging from weapons and armor to accessories and other items. ■ PVP Battle You can form a party with other players who live in the same server, and create your own

Incidence of gallstone disease in African-Americans: a role for apolipoprotein E epsilon4? African-Americans have a higher incidence of gallstone disease than Caucasians. Here, we assessed the influence of the apolipoprotein E (apoE) epsilon4 allele on the risk of gallstone disease in African-Americans. Seventy-seven patients with gallstones undergoing cholecystectomy (23 epsilon4-positive,

54 epsilon4-negative) and 182 age-matched Caucasian controls (61 epsilon4-positive, 121 epsilon4-negative) were studied. Eighty-six percent of the African-American patients were women, compared with 45% of the control subjects, but the difference was not statistically significant. Thirty-six percent of the African-Americans were found to have one or more components of the metabolic syndrome, compared with 22% of the controls, but the difference was not statistically significant. The frequency of the epsilon4 allele was 27% in African-Americans and 13% in Caucasian controls. The allelic frequencies of epsilon4 and non-epsilon4 were not different between the African-American patients and the Caucasian controls. Among the African-

American patients with gallstones, the frequency of the epsilon4 allele was similar in those with and without components of the metabolic syndrome (26% vs. 21%; P = 0.72). The only risk factor for gallstones among African-Americans was female sex (odds ratio [OR], 4.24; 95% confidence interval [CI], 1.71-10.44; P = 0.002). There was no association between the epsilon4 allele and the risk of gallstone disease. The apoE epsilon4 allele is unlikely to play a major role in the development of gallstones in African-Americans.Q: Tern
