The use of 2D graphics is part of a very polished and modern game. The main focus of the graphics is the presentation of the three factions and their armies. The development of the graphics for the factions and the troops was a highly complex task for me. There is a lot to implement and maintain. Wave 1 is in stores now! Your captains don't need a look-inside to know this is the hottest new iteration of Star Trek gaming yet—indeed, they'll jump off the shelves and start aiming phasers at you the moment they see it. And we're here to tell you why... The Look and Feel If you're a fan of the films that kickstarted the Kelvin timeline, you'll be greeted by familiar sights and sounds as you enter the world of Star Trek™ : Starfleet Academy—that is to say, if you're looking for things to remind you of Trek. This throwback starship-design approach has been added because it's what the game represents. Star Trek is a world of innovative, far-reaching technologies that even the best imaginable Starfleet can only deploy in such a way that it's still recognizable as, you know, a Starfleet ship. That's why playing a deck of cards might still be on the menu, and why the uniforms are iconic and gray as day. But back to the game itself! The good news is that the game is pretty straightforward—you either win or you lose, and victory is all about strategy and careful planning in the simulation mode—so in the end it's very much about how you control your ship and crew. Balance, of course, is everything. And since the stuns and phasers of the original television show and the motion picture trilogy are conspicuously absent, this battle rages between your starship's shields and its special weapons—items drawn from Starfleet's arsenal of superweapons. If you're a real fan, you'll know that some of these weapons are kept in a pool, to draw from when you're put into specific situations. Each game plays a bit different, with each of the different special weapons having their own personality and requiring unique strategies to

bring them out and use them. In Wave 1, for example, you'll find the stardrive (think: warp speed, but without the engine) and its important modifier beamshot is called the superlaser, to help you create massive damage and destruction. If you're feeling really ambitious, however, you can spend points to equip the starboard warp five engine and capitalize on its invisibility and cloaking special skills. To accomplish this, let's briefly discuss
