Say I have the following list: val l = List(1, 2, 3, 4,

5, 5, 3) What I need to end up with is: List(3, 1, 2, 4, 5, 3, 5) Essentially, by sorting the first group of the list into a smaller list and then moving the group that was already sorted to the index of the larger list, with the original index left unaltered. This is a problem for me because I have a list of lists and need to perform this operation within that list. I tried the following: val sorted1 = l. b7e8fdf5c8
