A new ultrastable bipolar electrochemical cell design (USBC), which differs from previously reported cylindrical USBCs only in the shape of the outer electrode, is reported. The electrode consists of a macroscale capacitor electrode and a small microscale current collector, which are separated by a microporous membrane. To demonstrate the electrochemical properties of such USBCs, a large-area, parallel, and miniaturized USBC is produced. The resulting USBC exhibits excellent electrical properties and superior long-term stability during bipolar impedance spectroscopy. The USBCs are shown to be suitable for a broad range of electrochemical applications.The Next Challenge for Agile.NET As a.NET developer, it's comforting to know that there's a good percentage of the programming world supporting and praising the.NET platform. Also, as a.NET developer, I'd like to think that the number of important reasons for using.NET continues to grow. In my opinion, with the language in the near future supporting multi-core architectures and possible multicore with multiple CPU threads,.NET offers the best of breed language solution for future-proofing software solutions. The mobile phone world is leading the way in open systems and services for the future. Companies are developing "cloud"-based mobile phone services and using HTML5 as the runtime to deliver Web applications. Developers are embracing this movement and developing for the Web. This flexibility is exciting, as it offers "apps" written in Web languages (such as HTML5, JavaScript, and JQuery) to run on the Web. If you can access your application over the Web, it is certainly convenient and efficient. With
