The first word in the name of Photoshop is a line from Richard Strauss's tone poem *Also Sprach Zarathustra* (Theme from *2001*): "Photoshop." Therefore, we start all our Photoshop tutorials with its name. ## Understanding Photoshop's Track System To understand the Photoshop workflow, you need to understand the concept of layers and how they relate to the image you're working on. Figure 18-1 shows how a Photoshop document looks in the workspace. FIGURE 18-1: This image has four layers: the background, the photo, the darkened hair, and the skin. Layers are a Photoshop concept that simply says, "I'm working with different parts of the image." Unlike the workflow in other image-editing programs, you don't cut and paste parts of an image into another area or copy a layer. Instead, you place one layer over another, and the most recent layer on top is the visible layer. In Photoshop, a *\_layer\_* is anything you see within the Photoshop workspace. You see a layer on the Layers panel. Each layer has its own name and its own color. A layer's name always displays in the upper-left corner of the layer, and its color may be indicated by a yellow arrow, as shown in the figure. Although you may have other sections in Photoshop open (that is, you may be doing other things such as creating a new document, using the Pen tool, or working with a drawing tool), Photoshop always keeps track of the last applied layer. For example, in Figure 18-1, I created the selection for the dark hair on the top layer. If I had accidentally cut the hair and moved it out of the layer, I would have to continue working with the top layer, as if the hair had never been drawn. The whole process of applying, editing, and then erasing the hair is all based on the last applied layer. You can have many layers active at once. For example, in Figure 18-1, I have four active layers: the background layer, the photo layer, the darkened hair layer, and the skin layer. (The darkening of the hair is one of those jobs that needs a couple of layers.) Each layer is labeled and has its own name so you can find it quickly. ## Creating a Layer Each new Photoshop document has one background layer. The background layer is the solid area of your background where

get started right away. Custom Brushes Photoshop Elements 13 includes rich brush selection tools that allow you to paint images in ways you never thought possible. These brushes provide a myriad of possibilities that are not always available with regular Photoshop brushes, such as blending textures, materials, and stamps. You can even use them as textures with the built-in Energetic and Photographic texture tools. Another benefit is that because of their interactive nature, you can choose to dynamically display them on a layer, such as blending a set of custom blur, exposure and texture brushes. After applying the brushes to a layer, you can drag to move, edit or delete them, which makes it quick to change the look of your image. Layer Masks Photoshop Elements 13 lets you work with masks, a powerful feature that allows you to temporarily change an area's color, style or transparency. You can use masks to apply more than one layer to the same region of an image. This is an easy way to create complex

Walking is the most common form of aerobic exercise. As such, most non-athletic individuals are capable of walking from place to place. For example, people exercise by walking from room to room within their house. People often walk from one room to another, or from their kitchen to their living room. In leisure situations, people often walk to a beach or lake, a golf course, or other location for recreational purposes. There are, however, many situations where people or other animals need to walk long distances without assistance. Athletes, for example, may participate in cross country running, marathon running, running events, and the like. Military personnel, such as peace keepers, police and fire fighters, and the like may need to carry loads of equipment and walk great distances to reach a target location. Commercial delivery trucks often must travel long distances carrying goods to various locations. People may also be required to walk long distances when injured. Victims of automobile accidents, for example, may be transported to an emergency room, for observation and/or treatment. Military personnel or peace keepers, as well as victims of other disasters may have to carry equipment and walk long distances. Athletes, military personnel, or peace keepers may need to transport heavy loads over great distances. These individuals may carry loads of up to 50 or more pounds (22.7 kg) in military situations or may carry loads of up to 100 pounds (45.5 kg) in athletic situations. For many individuals, the walk from one room to another in their home or from their kitchen to their living room is long enough to be a good form of exercise. However, for athletes, military personnel, peace keepers, and the like, a very long walk or run of thousands of feet may be required before reaching their destination. Likewise, many individuals, such as those recovering from automobile accidents, may need to walk from their home to their garage or from their home to the hospital for treatment. As these examples suggest, people or animals who must walk long distances often have difficulty carrying loads while doing so. Delivery trucks of all types suffer from the same difficulty. Federal regulations require that commercial vehicles be equipped with safety apparatus to allow the driver to safely transport goods and passengers. One such safety requirement involves a combination radio/cellular telephone that allows the driver to communicate with law enforcement officials. The Federal Safety Standards for Commercial Motor Vehicles (FSTs) requires that a vehicle display a two-way radio, with a built-in cellular telephone.

Do You Hear the People Singing "Do You Hear the People Singing" is a song written by Anne Murray and Barry Mann for Murray's first country music album "Anne Murray" (1978). The single, which peaked at number 17 on the US country music charts, is one of three songs from the album to chart inside the Top 100 and has been described as "quite a pleasant, poppy track". The objective of this project is to determine the effects of participation in the Vietnam War on the physical development of children, using published data as well as data collected from a cohort of New York City, United States, children. The main dependent variable is height-for-age. The main independent variables are participation in combat and duration of participation. The primary analytic strategy is multivariate regression. Another goal is to determine the dependence of participation in the Vietnam War on family income, using data collected about the cohort. The hypothesis to be tested is that the pattern of risk for participation in the war is that of an upwardly sloping and accelerating curve of participation with increasing family income. Another hypothesis to be tested is that the adolescent cohort of the Vietnam-era has a height profile
