The FPS from Out of the Park Developments has a very interesting premise: You're a mercenary with a "slight" proclivity for killing people. The goal of the game is to go through the many missions set out for you (most of which are assassinations) and make loads of money." The Good: The Bad: I will start by saying that I am a big fan of the Out of the Park's production. That and I grew up during the golden age of gaming, so any chance to rekindle my childhood is always welcome. Which brings me to the start of my problem with the release of the campaign, the difficulty in making a great FPS gaming experience. Out of the Park cannot make a great PC video game that only grows harder over the course of the game. This is evident from the very beginning. When I first put the game into my graphics card, I was greeted by a completely black screen. I was not able to turn on any of the games graphics options and the game was not responsive at all. I had to call my brother who's computer I am using right now and he fixed the problem. I am able to play the game now but I am very disappointed in the experience I got the very first time I played the game. Story When I first started to play the game I was very turned off by the main story line. I was expecting a great story line but this game did not live up to my expectations. There's a main story line that is very very boring and very little about it is even hinted in the videos of the game. The story line is pretty much along the lines of this guy kills you, you kill him and you get paid. It doesn't even have a real plot but they tried to make it funny with silly situations. Gameplay The game starts off with a skill point system that seems to have more to do with the payment you will receive from the jobs you will take instead of the abilities you gain. I have no idea how the skill point system works but let's just say that the skills you gain do not really make a difference in the gameplay. And for all the research you can do into your character, skills seem to have very little effect. But what about story and characters? Well, forget it. The story is non existent and the characters are just generic cut scenes from the story.
