Easy to use Overview Editing video with its wide format support is made simple. A timeline is used for the editing operation. Depending on the selected layer, more than one track can be edited simultaneously, and the transitions between different tracks can be linked together. Editing features You can arrange the video layers at any order, and you can move layers and cut different clips at any time during video editing. You can split different clips (frames, seconds, minutes, etc.), merge tracks, and you can also copy and paste frames. You can adjust the filters on the newly inserted clip. Layer effects, brightness control, contrast control, saturation control, hue control, and color temperature control are supported. You can also adjust the frame size, frame rate, frame size after cropping, and so on. Photo editing You can add a layer to your video, select a frame from the video, and edit it. You can also use the commands for image merge/cut/paste, and adjustment of brightness, contrast, saturation, etc. Applying effects and filters, you can adjust the brightness, contrast, saturation, hue, and chroma of the image, and you can use a selection to edit the image. In this video, you can clearly see how this utility can help you improve videos on the spot. Video templates (Basic and Advanced) 1: Selecting a template and creating The first step is to select the template that matches your video needs. Then choose the software settings and other options, and you are ready to go. It only takes a few steps to create great-looking videos (see Screenshots). Three workflows After you select the template, you can choose one of the following three workflows: A: You can go 'Native' by using the template as a source to the destination folder. B: You can go 'Karaoke' by selecting a clip of the desired length from your source folder, and pasting it at the end of your video (duration that differs from length of source clip). C: You can go 'Sceneshop' by selecting the whole clip of the desired length from the source folder, and then selecting the desired place in the final output using your timeline. Automation You can automate almost all the workflows using the built-in macro recorder. You can record your sequence by reusing the already available macros, and record
