Here are three important guidelines for using Photoshop successfully. Use a computer with a screen resolution of at least 1024 x 768. Open an image at least 600 x 600 pixels (although you can use a larger size if the image doesn't fit on your screen). Convert all images to 16-bit color. See Chapter 7 for more about image resolution and how to choose the right one for your application. Whether you're a beginner or an expert, you can find tutorials for common Photoshop tasks at one of many Web sites that host tutorials. For example, you can access the following tutorials at ``: • `Best Computer Graphics Tutorials and Articles (``): These tutorials cover everything from basic software skills to special effects that are used by graphic designers. • `Photoshop Tutorials (``): These tutorials are a great place to find out how to create effects in Photoshop. • `Photoshop Secrets (``): This site offers many tips and tricks for creating images that are interesting and effective. Three other sites that are very helpful for viewing Photoshop tutorials are `` (my own site) and `` and `` (both run by David Brisse), which offer free drawings and tutorials based on the artwork of renowned illustrators and cartoonists such as Carl Barks, Paul Dini, John Byrne, Jack Kirby, and Roy Lichtenstein. Make sure you have an image on your desktop named icon.psd when you open the file. A tutorial that shows you how to work with layers, masks, and blending modes is available at `www.photoshopresource.com/photoshop.`. This tutorial presents every layer, mask, and blending mode available in Photoshop. ## Updating Documents Sometimes you just have to get those files updated — for example, if you misspelled a character name or forgot to include a keyword for your company's logo. Photoshop has a very helpful feature that enables you to update documents on

User Interface Here are screenshots of both versions. Note that the Photoshop Elements interface is similar to a Pages document. Both interfaces have a home icon and an open/close tab at the top of the screen. Some tools you find in Elements will be called by a slightly different name. The buttons and menus in Elements are very similar to those of Photoshop. Icons Elements contains a full set of icons: The home icon is similar to the icon found in the title bar of every program. It is used to return to the home screen. The saved icon can be found in the upper-right corner of the home screen. It indicates whether the home icon is used to start a new project or to return to the home screen. The lock icon is used to lock the program. The small square normally covers the icon. This icon is used to save the program. The arrow on the right denotes a folder. The folder icon is used to view the contents of a folder. This icon is also found on the title bar of Elements. The program is running in the background. The small square represents an image. The small arrow indicates an image. The small rectangle in the middle of the ruler indicates an area of an image. The small rectangle in the bottom-left corner represents a canvas. You will find these icons on menus and buttons that appear when you need them. Notes Some menus in Elements have a "Tips" button next to them. You can click this button to view a note about the features of the menu. A note icon is found in the top-right corner of the home screen. Hidden menus Most menus have an option to hide the menu. You can find the option to hide menus by clicking the gear icon on the title bar of the home screen. The gear icon can be found on the title bar of the home screen. Some menus contain different options. You can navigate using the arrows on the left or right of the menus. The Notes icon can be found to the left of the text entry box. The Program tabs The Elements tabs are hidden by default. You can reveal the tabs by clicking the tab bar, the three dots on the right of the title bar. You can rearrange the tabs by dragging their respective arrows. 05a79cecff

Q: Is there a limit on how many equations I can put in a single line in the environment? Having a minor in theoretical physics as a background, I have already solved many systems of linear differential equations in my time. So often, I find myself writing up several equations at a time like this: dy/dx = A(x) dy/dx = A(x) dy/dx = A(x) ... And I know that I can add as many equations as I'd like in a single line. But in fact, is there an upper limit on how many equations can I put in a line? My question stems from this one where I do have two equations: $$y=\mathbf{x}_1 \cdot \boldsymbol{\lambda}(x)+\mathbf{x}_2 \cdot \boldsymbol{\mu}(x)$$ As for my code, I just followed @henningpeters' advice and moved the a package I'm using for differentials into the preamble: % \ProvidesClass{publican2}[2018/08/05 v0.0.1 Publican] \LoadClassWithOptions{minimal} \DeclareOption{Kp}{\PassOptionsToClass{#1}} \DeclareOption{pkp}{\PassOptionsToClass{#1}} \DeclareOption{fs}{\renewcommand*\familydefault{\sfdefault}} \DeclareOption*{\ClassWarning{publican2}{\MessageBreak This class has no definition of option '#1'}} \ProcessOptions\relax \LoadClassWithOptions{publican} ewcommand\linapp[3][]{% \substitute{\rm}{\color[red]\bfseries}{}#3 \addlinespace \csname @item\endcsname{#1}{#2}{#3}} ewtheorem{lemma}[theorem]{\bfseries}{Lemma} ewcounter{recursion} \AtBeginDocument{% \setcounter{
