EA SPORTS FIFA 20 and FIFA 19 were also powered by real-world data, but with lower levels of fidelity than FIFA 22's HyperMotion. During a 20-minute gameplay presentation at E3, we were given a brief introduction to FIFA 22's new technology and gameplay. FIFA 22's real-time physics simulation is improved in various ways. 1) Battlefield Physics The most significant upgrade in the game's physics engine is a new, more accurate physics simulation. This includes deeper impact detection for ball-to-body collisions and a new, more robust collision detection algorithm. The latter is arguably the most critical part of the physics simulation, as it allows for objects such as a defender to push the ball past a striker, or an attacker to push through an opponent. EA Sports added harder pass collisions, plus better ball control when players are working the ball at full-speed with their lower legs. 2) Dynamic Player Movement The engine can now produce complex movements in players and the ball. For example, the engine can calculate a player running full-speed and changing direction all in the same animation frame. The engine can now also produce goals even when a shot is blocked. 3) New Player Features In addition, the engine now accurately and fluidly calculates offensive and defensive actions. For instance, a player can control the trajectory of a headed pass with full control of the wrist, and experience more realistic collisions and off-the-ball movements. Players also have more intricately-detailed animations, with parts of the body that weren't previously visible in game mode being more clearly rendered. 4) Shot and Ball Trajectories Players can shoot the ball with more accuracy. 5) Goalkeeping Precision The in-game keeper can make stronger reactions and can time and predict saves better. He makes more precise long-range goal kicks, which helps prevent the match from ending on a 1-1 draw. The goalkeeper's confidence levels also improve - he knows better when a shot is likely to go in, and keeps his defense organized and informed as to when a player could threaten him from the penalty spot. 6) Teamwork and Tactics FIFA 22 is the first EA SPORTS FIFA title to feature tactical AI. During the demo, a midfielder released a long pass into space for a forward to run on to. The pass was played out with the
