

Live activation on the pitch offers the player-experience, like shooting a penalty for your keeper, juggling the ball to maneuver it across the pitch or even putting on a raking shot from distance. Kinect capabilities now have a much more significant presence in the game, with the ability to use both hands and feet to control the ball; with the same accuracy, sensitivity and responsiveness you would expect from a real ball. In "FIFA 22," Kinect now allows players to use both their hands and their feet to interact with the ball in addition to on-pitch controls. Check out FIFA 22 for Kinect on Xbox One to find out all about the new capabilities including full-length FIFA Ultimate Team demos. # # Licensed to the Apache Software Foundation (ASF) under one # or more contributor license agreements.
