A laser printer is a piece of office equipment that will print any

documents or items you may want on the paper, letterhead, cardboard, text pads, etc., thatâ€™s been fed to it through a paper feeder in your office computer or microcomputer. The laser printer may be a wide format printer, colour printer or a mono laser printer.

Laser Printers for Home and Office

Laser printers are fast and easy to use, but they canâ€™t magically print your faxes or spreadsheets. You may need to purchase a special cable to connect your printer to your computer. And, itâ€™s important to know which type of printer is best for you before purchasing one. Consider these factors when choosing a laser printer for home or office use.

Factors You Should Consider When Purchasing a Laser Printer

These are the top 5 factors you should consider when purchasing a laser printer for home or office use.

Speed: High-speed printers are easy to use and print a lot of information in a short period of time. Speeds of up to 40 pages per minute are common on desktop laser printers. Low maintenance: Laser printers are easy to maintain. Because they don't use any ink to print, they won't smudge, smear or run. These printers typically use toner cartridges rather than ink and rollers, which makes them low on maintenance. Cost: If you use your laser printer only occasionally, you might be able to find one in the \$150 to \$400 range. Many laser printers today are relatively inexpensive. Reliability: Laser printers are easy to use and usually have a low rate of problems. They are among the most trouble-free printers available. Fun to use: Laser printers are easy to operate and have a simple user interface. They are fun to

use and they print colorful, beautiful documents. With so many lasers available, it can be hard to decide which is the best choice for your office. You may also want to compare different printers to choose the one that's most suited for your needs. How do laser printers work? In printing, a laser is a device that uses light energy to create dots of ink on a receiving surface, such as paper. In desktop laser printers, a laser beam scans the surface of a document and creates pixels of black ink as it moves. Some laser printers,
