VPLive Crack + Registration Code Download (Latest)

VPLive is a software package that connects to a console data logger and sends data to the APRS/CWOP system. It also acts as a conversion program. It allows the user to convert the correct units and display formats for the commonly used data. It also includes the ability to force a console to update a setting more often (thus forcing the VP to recalculate the pressure and/or top of the atmosphere for the point in time the change occurred), which may be useful if you are experiencing timeouts while using VirtualVP. HISTORY: Version 1.0 was released in February, 2011. Version 1.1 was released in March, 2011.

Version 1.1.1 was released in September, 2011. Version 1.2 was released in February, 2012. Version 1.3 was released in March, 2012. Version 1.3.1 was released in April, 2012. Version 1.4 was released in February, 2013. Version 1.4.1 was released in July, 2013. Version 1.4.2 was released in October, 2013. Version 1.5 was released in January, 2014. VPLive 1.5.1 was released in April, 2014. VPLive 1.5.1.1 was released in September, 2014. VPLive 1.5.2 was released in January, 2015. VPLive 1.5.2.1 was released in May, 2015. VPLive 1.5.2.2 was released in May, 2015. VPLive 1.5.2.3 was released in September, 2015. Version 1.5.3 was released in February, 2015. VPLive 1.5.3.1 was released in June, 2015. VPLive 1.5.3.2 was released in June, 2015. VPLive 1.5.3.3 was released in August, 2015. VPLive 1.5.3.4 was released in January, 2016. Version 1.5.4 was released in March, 2016. VPLive

1.5.4.1 was released in June, 2016. VPLive 1.5.4.2 was released in June, 2016. VPLive 1.5.4.3 was released in September, 2016. Version 1.5.5 was released in February, 2017. VPLive 1.5.5.1 was released in April, 2017. V

VPLive Crack + With Serial Key

VPLive is a program for connecting to a Weather Data Logger Console or VP Console over serial or TCP/IP. It displays live weather data from the console to the APRS/CWOP "weather" user who has the console connected. It will also backfill the archive files with data from the console and send it to CWOP/APRS if needed. It can do both CWOP and APRS uploading, and converts the VP (or Vantage Pro) recordings to other formats as needed (e.g. NOAA TDG conversions). It can download the archived data to your local machine for use with SoftWx or other software. VPLive features: *

Connect to Console or VirtualVP *

Connect to a USB Vantage Pro data logger through a serial port or through TCP/IP port *

Displays live and archived data and date/time from the data logger

* Calculation and Conversion of many types of weather data (almost anything the data logger can get) from the displayed data logger data

* CWOP uploads to 10 minute or 5 minute updates or backfill of archive files *

Automatic archive file download from data logger to local file system *

CWOP server list includes all of the U.S. CWOP Providers (as of July 11, 2008) *

CWOP passcode if a user has a different passcode on the console *

User has the choice of which sensors are sent to CWOP or APRS *

User can set the time range of CWOP data updates (e.g. one minute to five minutes) *

Automatically update the passcode at start-up *

VPLive can be "threaded" to work on an APRS/CWOP overlaid file continuously

while on the console or when the console is off * APRS/CWOP statistics are displayed on the console during operation * Speed, volume, and brightness can be set * Two color coding options are provided for displaying severe weather messages * Real-time weather information and forecasts are provided from the NWS (National Weather Service) web sites as well as through other APRS/CWOP sub-clients * Wunderground web uploads (CIN/YAK/CAL/CDT/HRRR/HQX/CTD and others) * Pre-checked air pressure so no further conversion to air pressure is needed * Data logger recordings can be archived * VPLive can "dummy

VPLive Download

VPLive is a software application that connects to a Davis Vantage Pro 1 or 2 Weather Station console and displays the live data. It calculates the station pressure (i.e. actual pressure), altimeter pressure, and running averages needed to properly generate and send APRS/CWOP data. It sends the weather data to the APRS/CWOP system. VPLive also has a feature that will force the VP barometer to update more frequently than the standard 15 minutes. It can run WeatherLink at regular intervals to allow WeatherLink to download the archive data from the console and write it to the archive file. It requires very little CPU time or system resources while running (for example, on an older 500 Mhz Pentium III, VPLive uses around 1/10 of 1% of the CPU's time). Before VPLive can talk to the VP console, you must first do

some configuration. VPLive must connect to either the console (or Envoy) or VirtualVP VirtualVP which allows multiple weather programs to connect to a single console without affecting each other, and without the need of purchasing a hardware or software serial splitter). VPLive has a feature in which it will periodically disconnect from the console, run WeatherLink to download the archived data, and then reconnect to the console. This is useful if you are not using VirtualVP. Listen only mode, present in previous versions is no longer supported. Use the Settings/Console Com. menu item to bring up the dialog box that lets you enter the settings for VPLive's communication with your console data logger. VPLive can connect using a serial port or TCP/IP. Use serial to connect to a physical or virtual serial port. There is an option for letting VPLive restart the Davis USB device driver if VPLive thinks it is necessary. **ONLY USE**

THIS OPTION IF VPLive IS CONNECTED DIRECTLY (not through VirtualVP) TO A USB VANTAGE PRO DATA LOGGER.

There is a known issue with the Davis driver that sometimes causes spontaneous loss of communication to the console. It requires unplugging and replugging in the USB cable or rebooting the computer to regain connectivity with the console. This problem does not happen to everyone with a USB data logger, and when it does occur, it happens at very random intervals, sometimes days, sometimes weeks. By checking this option, VPLive will automatically restart the device driver when the connection to the console is

What's New in the?

VPLive is developed to be a software application that connects to a Davis Vantage Pro 1 or 2 Weather Station console and displays the live data. It

calculates the station pressure (i.e. actual pressure), altimeter pressure, and running averages needed to properly generate and send APRS/CWOP data. It sends the weather data to the APRS/CWOP system. VPLive also has a feature that will force the VP barometer to update more frequently than the standard 15 minutes. It can run WeatherLink at regular intervals to allow WeatherLink to download the archive data from the console and write it to the archive file. It requires very little CPU time or system resources while running (for example, on an older 500 Mhz Pentium III, VPLive uses around 1/10 of 1% of the CPU's time). Before VPLive can talk to the VP console, you must first do some configuration. VPLive must connect to either the console (or Envoy) or VirtualVP VirtualVP which allows multiple weather programs to connect to a single console without affecting each other, and without the need of

purchasing a hardware or software serial splitter). VPLive has a feature in which it will periodically disconnect from the console, run WeatherLink to download the archived data, and then reconnect to the console. This is useful if you are not using VirtualVP. Listen only mode, present in previous versions is no longer supported. Use the Settings/Console Com. menu item to bring up the dialog box that lets you enter the settings for VPLive's communication with your console data logger. VPLive can connect using a serial port or TCP/IP. Use serial to connect to a physical or virtual serial port. There is an option for letting VPLive restart the Davis USB device driver if VPLive thinks it is necessary. **ONLY USE THIS OPTION IF VPLive IS CONNECTED DIRECTLY (not through VirtualVP) TO A USB VANTAGE PRO DATA LOGGER.** There is a known issue with the Davis driver that sometimes causes spontaneous loss of communication to the

console. It require unplugging and replugging in the USB cable or rebooting the computer to regain connectivity with the console. This problem does not happen to everyone with a USB data logger, and when it does occur, it happens at very random intervals, sometimes days, sometimes weeks.
