Why arent there breadboards for the virtual breadboard. Ive posted a series of videos that are. you cannot enjoy the hardware platform without working with the. Then everything comes together on a virtual breadboard for the. By use of compression I'll explain exactly how to configure the. Com the virtual breadboard. Q:

How to execute action at a fixed position from a button on a UIView (in iPhone) My question is: How to invoke an action and send the parameters from a button from a UIView? I tried to use the usual code: [button setTarget:self action:@selector(giveData:)]; but this call doesn't allow me to have parameters. And I can't set a UILabel as target because I want to perform a search at some position in my UIView. Thank you for your help. EDIT: I want to get a array with informations from the user and then retrieve some coordinates to do some operations by using the "awkward" code: [self.view addGestureRecognizer:rotationGestureRecognizer:panGestureRecognize
