The login URL is This app redirects users to another page after they have logged in. This is working perfectly. However, I want to detect when this occurs so I can display an appropriate message. The problem is that once the user is redirected, the server becomes unresponsive until the redirect is finished. I know this is because the server is waiting for the request to complete. How can I detect when the redirect is finished? A: You can use onResume if you use a Cordova app. The onResume lifecycle callback gets called when a Cordova app starts up after being suspended. This typically happens when the app is finished processing and has no active Internet or data connection. If the app is in the background, it may be sleeping to reduce power usage. Q: Prove $\sin(x) \geq 0$ for all $x \in [0, \pi/2]$ Prove that $\sin(x) \geq 0$ for all $x \in [0, \pi/2]$ How do I approach this? A: Hint: let $x \in [0,\pi/2]$ and $y=\pi/2-x$. What you have to show is that: $$ \sin (x) \geq 0 \iff \sin (x+\pi/2) \geq 0 $$ Now, if you rearrange the terms, you should be able to conclude that: $$ \sin (x) \geq 0 \iff \sin (y+x) \geq 0 $$ The LHS is positive iff the RHS is, by the Intermediate Value Theorem. , *Phys.
