version only. download matlab 2013 portable full versionQ: Using QList for C++ QT I am trying to create a smart wallet and I have an accept method where I have to check if the received money comes from another wallet. I have used a  
QList as the wallet IDs to store a list of wallets. I only need to check the position of the wallet ID in the QList. QString payID; for ( int j =0; j ::iterator iter\_tmp; iter\_tmp = walletID.find(payID); if (iter\_tmp == walletID.end()){ emit  
newWalletConnection(payID); } else{
