Merciful, the Merciful! 1. Ali-Llahu li-Mumtakhana! 2. We sent two of Our angels to
them, one (of them) as Umm-ar-Rahman and the other as Umm-al-Qiyam. 3. They
(the angels) said: "O sons of Adam! Verily, We bring you glad tidings of the
forgiveness of your previous (sin) and of the good that is prepared for you together

control c-fos expression and lactogen production in undifferentiated mouse Sertoli
cells. Prostaglandin E₂ (PGE₂) is the major prostanoid produced by Sertoli cells and
inhibits gonadotropin stimulation of the germinal epithelium. Cyclic adenosine
monophosphate (cAMP) is the second messenger for PGE₂, and in immature mouse
Sertoli cells PGE₂ and cAMP stimulate Fos protein expression, as well as lactogen
production by rat Sertoli cells. In this study, the effect of PGE₂ on cAMP levels and
cAMP-dependent protein kinase (cAPK) activity was investigated in immature Sertoli
cells. cAPK activation was shown to be essential for the control of Fos expression and
lactogen production in response to PGE₂. In addition, the effects of PGE₂ on cAMP
and Ca²⁺ levels, as well as cAMP-dependent protein kinase activity, were studied in
immature Sertoli cells. PGE₂ induced a rapid and transient accumulation of cAMP,
which was associated with a sustained increase in cAPK activity. In contrast, PGE₂
did not affect levels of free cytosolic Ca²⁺ or Ca²⁺-ATPase activity in immature
Sertoli cells. P c6a93da74d
