
Drevitalizefullversionserial [PORTABLE]

fes clic en el botó genera el comandament per generar un comandament que el teu usuari no pot utilitzar, que en teu servidor es cap d'aplicació. ara, entre al menú dades de la clàusula del comandament, selecciona la clona de la presència de version, i selecciona vesqui la clònica, i demanarà una clau secreta \$name que es combina amb el nom de les taules i carpetes. si demanàs una clau noua per una nova carpeta, va haver de modificar l'origen per simplificar-lo! \$version és el nom del perfil de la versió actual de la carpeta que desplegarà el botó de clona. es pot calcular amb la versió actual de les taules i carpetes. de vegades, per abonar un sistema o servidor, es requereix que les dades no canviïn de manera que la clona sigui vàlida. si el comandament s'utilitza per transformar-les, no es pot esperar que siguin vàlides per si, de manera que la clonació està d'acord amb les noves dades. així, seguiràs d'escriure al formulari d'enviament el nom de la carpeta i el nombre del perfil de la versió i els nombres de taula i carpeta que tindrà la versió. drevitalizefullversionserial [-e hostname] [-p port] [-u user name] [-t table name] [-s [-c] [-i secs] [-g] [-b] [-h] [-r] required options -e the server to communicate with -p the port to use -u the login information to use -t the table to use -s show progress -c continue on errors -i how many seconds to wait between checks -g show the number of files waiting to be checked -b show the number of bytes waiting to be checked -h show the hostname of the servers -r do a recursive check for this directory (read for path) output the command completed successfully. examples % drevitalizefullversionserial -e xxx.xxx.xx -s the command completed successfully. % drevitalizefullversionserial -e xxx.xx -u user -p 1234 -c -s the command completed successfully. drevitalizefullversionserial[30] connected to server (xxx.xx, 1234) % drevitalizefullversionserial -e xxx.xx -t \$table -s -c -i 30 the command completed successfully.xx, 1234) *** checking \$table. % drevitalizefullversionserial -p 1234 -u user -t \$table -i 20 the command completed successfully. *** the number of files waiting to be checked is \$(files?). % drevitalizefullversionserial -e xxx.xx -t \$table -u user -p 1234 -i 20 the command completed successfully. *** checking \$table. *** the number of bytes waiting to be checked is \$bytes(1073741824). % drevitalizefullversionserial -p 1234 -u user -t \$table -i 20 -b the command completed successfully.xx -t \$table -u user -p 1234 -i 20 -b the command completed successfully.
