I'm happy with Lightroom and I'll grant that Photoshop is still the king of the editing world. On the other hand, even if the applications have improved, sometimes I'm not happy with certain features. After reading what you said after the install, I think I could understand it. But now I am developing a better estimation of the new features of Lightroom 5. **I'm not ready to replace Photoshop yet with Lightroom, But I'll jump on the update as soon as possible after Lightroom 5 is released to the public.** I'm happy that Lightroom 5 is out there to give me a chance to see what they have in store for us and maybe move away from Photoshop. **My biggest problem now is that my computer is not booting correctly. It seems like a very low quality release.** I still like the new versions, but if the booting problem persists then I'll have to look for

other photo editing software like Lightroom. There is no built-in RAW converter, so is Lightroom a replacement or just an adjunct? That's unclear at this point. When moving over from CS3, you could have gone with either the CS4 or CS5 legacy workflow. However, now you can just use Lightroom 5 and be able to bypass the whole process of converting RAW to JPEG in Camera Raw. It is good to not be forced into that process. As for the internal features of Lightroom, I think you will not be too disappointed with the output this release. I'm sure there are many areas that could be improved, but these are some features that should make a light footprint on your hard drive.
