Facebook is a Social Networking site that many people use. Although you can use Facebook for free, you can get a lot more out of it by using a tool called Facebook Hacking. This tool is easy to use and can be used to hack into your Facebook account and change your settings. It is important to keep in mind that hacking into Facebook is illegal and most people who do it are breaking the law. However, if there is more than one person using your account, or if you are just curious about the features of Facebook, it might be worth it to hack into your account. Keep in mind that if you find out that you use Facebook without permission, or that you allow someone else to use your account, you could end up being fined for illegal activities.

I'm torn by how well Lightroom and Photoshop have followed Apple's move into high-resolution images. The ability to crop images is a great advance; it took Photoshop's favorite third-party plug-in, Cropper+ (developed by Loopable Media), to do the job. Cropper+ doesn't seem as well-rounded a cropping tool as the native Mac version. I generally prefer the cropping tools in Photoshop, which automatically crop out a portion of an image and then let me manipulate that portion. It's a great workflow, and standard on camera phones and digital cameras. Unfortunately, the new version of Lightroom doesn't have a native way to crop images. In the previous version, I would enlarge the image in the Cropper to full size, then use the existing crop tool, and then go back to the original resolution. The new version seemed to offer the same resolution cropping, and no ability to change the crop tool on a second pass. That's a big change. Luckily, it's not nearly as bad as the painfully clumsy interface of purely mobile-focused applications, such as Instagram, which I, also, dislike. Everything worked superbly on the iPad Pro, the display and touch of the stylus *painfully* laggy, and the application just felt awkward, whereas when I worked on the third-generation iPad (iPad 3) there were occasionally roadblocks. At times, documents opened, then would not open again. I had to quit the application entirely and restart. At times, the Ink sidebar would delay in responding, as if it were having trouble finding and placing the ink stroke. When I found a long (5 to 10 minute development) session was needed to save a badly-cropped crop of an entire photograph, it made me ill, to say the least. Fortunately, the Apple Pencil is exceptionally responsive, and while it's not as precise or accurate as the Wacom Cintiq Pro mouse, it is far better than any other digitizer I've tried.

Adobe Sensei AI is powering new, groundbreaking retouching and correction features in Photoshop. These capabilities are not available in Elements. Built on the principles of deep-learning AI, Adobe Sensei AI helps speed up the retouching process by learning to recognize patterns and learn from data to automatically detect and correct issues as they occur. 60– the first of many such mistaken but strangely kind actions (and its aftermath) that has made me feel like more of a human being and less of a hero. I've learned more from others about how to be different and patient than he'd ever learn. 88– finally got an edit that works well. It's not everything I hoped it would be and not everything I've hoped it would be, but it's working (at the moment)— and because **I'm the client**, the pressure is off. At least for the time being. ? 127– painters have been working with mediums similarly to those that painters of the past worked with, but the materials available now include many things that were unheard of a few years ago. The "hot" medium of today is much more important to many painting mediums than the quality of the "hot" materials was in the past. Mediums like "maple," "geiger," and "naphtha"— we have them in abundance now. It's great. 55– If there is a single combo that coordinates all the points I'll be discussing in this list, it is this one: Q.O.V.E.R.S T.H.E. I.N.F.O. You're never doing this right— you're simply doing it. The only milestone that will be the finish line for most of this journey is the creation of *your perfect vision*. This is what you'll be working on for the entirety of this list. 56– going to miss the heel on this one. This is one of my first purchases on Adobe's new website. It was a little confusing at first, but the support was very helpful. Telling to the designers who give me Photoshop.
