**Main Features:**

**Keyword completion**

tool! Keywords can be defined on your own - many people have problems with the execution of automatic "clicking" on links in emails, instant messages, chats, messages, etc. So our solution is to define "clicking" of links in all messages, as well as everywhere on the Internet. For example, if you receive a

message and want to "click" on the link, you can define it and KEYMACRO will be called. After that is completed, you do not need to worry about "clicking" on links anymore. Multiple accounts - keymacro is capable to work with multiple accounts! Not only with one account. You can define the 'network' and 'account'

separately, which gives you multiple accounts, so you do not need to have multiple software for each account.

Keymacro can also be used in mobile applications! Can be used with Android, iOS and Windows phone.

Keymacro is very light on the system resources and that is why you can use it even on an old phone.

No registration  
required! The  
application works with

recommended to set  
the name for the new

the new PDF file  
should not be same as  
the original PDF file.

Acrobat 8.x, 9.x, 10.x,  
X6, X7, X8, X8.5 and

really easy. There's no  
other way to say it. You  
just click, and it's done.  
You simply download  
the file and double-  
click to begin. A wizard

pops up and allows you to choose a language and then get to the main options screen. From there, you can choose whether you want to install this on all the computers on your network or if you want to select a single user. From there, you simply choose if you want to install the server, client, or both. Once the installer has

finished, you can select your language from the new screen. The user interface on this is really nice. Once you've decided what to do, it will start installing. Then, it will actually restart and get you through some user training. Now, if you're installing on a public computer, you need to be careful. In general, this is a good security

program, but it's not really used by the public. Because of

Chooser Ever! Quite possibly one of the most efficient and reliable language choosers ever to hit the Mac OS. This freeware application is a tool for the beginning language learner who needs to find the appropriate dictionary, or the professional translator. It will provide the right language and dictionary for any

language in the world. It allows you to choose among 35 languages and 450 dictionaries. Don't get me wrong - there are a lot of very good language choosers out there, but this one is unique. What makes it unique? It is the fact that the choices it provides are as simple as they are effective. The interface is straightforward and

easy to use. The application's strengths include a very long list of dictionaries, and the fact that it allows you to add your own custom dictionaries. The only thing that is missing is the capability to find new translations online. The dictionaries that are included in the standard language pack are extensive,

covering anything from one-to-one translation to literal translation.

The choice of dictionaries is probably the application's greatest asset. You can easily add new dictionaries or modify the ones you have, and the application will update its resources accordingly. The interface is intuitive, and no wonder - it was

created by the same people who created Rosetta Stone. In other words, it was designed to be user-friendly, and the designer's knowledge of the subject comes through the screen. The application has a built-in spell checker, a switch to let you choose from a number of styles, and an option to enable/disable auto

capitalization. It also has the ability to be used in the background. Pros: - Huge dictionary list, more than any other language chooser
