

Short Message Spider Crack License Code & Keygen

[Download](#)

Short Message Spider Free Download For Windows Latest

Short Message Spider Activation Code is an offline short messages writer. Short messages are little messages that can be transmitted from a cellular telephone to another, and from a computer to a cellular telephone too; this last is performed by a gateway server using an internet connection and a browser (for example: Netscape Navigator, MS Explorer). This application gives you the chance to prepare offline (saving money) all the short messages you want; in a second time you can send these messages during the connection to a web server through the internet. You fill the server forms with a simple copy-paste technique and the message will be sent to the cellular phone. Note: SMSpider don't deliver the messages, it's a job performed by the web server. □ outbox: it's the section where all the saved messages are stored □ phone book: it's your personal telephone directory □ settings: it's the section

What's New In?

With this application you can create and send messages from your computer to many mobile phones (cellular). Short Message Spider Features: - you can add your own short messages; - send messages from your computer to other mobile phones with a short message - search for mobile phone in the phone book - choose the default server - it's FREE. It's possible to change the default server, the ip address and the port. The applications uses the same account for all the servers. To edit or reset the server parameters you should edit the.ini file. This application has been tested with Internet Explorer v. 5.01 (also tested with 6.0),

Netscape Navigator v. 3.05, Mozilla 1.01, and 3.0b3. In my opinion, this application is compatible with Internet Explorer v. 6.0 and newer versions. It's also compatible with any version of MS Word. Here is the description of the application in simple words: Short Message Spider is an offline short messages writer. Short messages are little messages that can be transmitted from a cellular telephone to another, and from a computer to a cellular telephone too; this last is performed by a gateway server using an internet connection and a browser (for example: Netscape Navigator, MS Explorer). This application gives you the chance to prepare offline (saving money) all the short messages you want; in a second time you can send these messages during the connection to a web server through the internet. You fill the server forms with a simple copy-paste technique and the message will be sent to the cellular phone. Note: SMSpider don't deliver the messages, it's a job performed by the web

server. Here are some key features of "Short Message Spider":

- outbox: it's the section where all the saved messages are stored
- phone book: it's your personal telephone directory
- settings: it's the section where you can choose the default server. This section contains an archive where many servers are stored; you can add a new servers, modify, delete the data about the server you want. To send messages to users from USA & CANADA please download the proper server archive and overwrite the old. please insert the following data to register your copy name:
freeware surname: freeware unlock code:
2112121411111111229 Short Message Spider

Description: With this application you can create and send messages from your computer to many mobile phones (cellular).

Short Message Spider Features: - you can add your own short messages; - send messages from your computer to other mobile phones with a short message - search for mobile phone in the phone book - choose the default

server - it's FREE. It's possible
