VolumeStepAdjuster is a simple and Open Source utility that lets you adjust the increment / decrement step of your system volume when you're using multimedia keys. By default, this step is 2% or 4%, which may be not appropriate for high-precision setting. With VolumeStepAdjuster you can set this volume step to any valid value, for example, you can set the volume step to 1% or even 0.1%. The real volume step resolution available depends on your device. Please note that this tool only configures the increment / decrement step. It does not adjust the increment / decrement speed or any other parameter. For the program to work you must: · Open volstep_START.bat in text editor and change VOLUME_STEP variable to any value. Note, however, that this value is not in percents, but in abstract units. Mostly, 1 unit equals 1% step when using button controls and 2% when using a wheel controls, but it really depends on your device. · Use volstep_START.bat to run the tool in background. It will also place this app in autorun. · Use volstep_STOP.bat to stop the tool and remove its entry from autorun. Kuban Airlines MIKO-X7 Review Transforming a cramped, cramped cockpit on a budget airline By John K. Meyer, AKA Thad The MIKO-X7 is a very well built device with thoughtful and responsive software. It's not a stand-out performer in the world of smartphones, but it is a good fit for its target audience. If you're willing to look past the fact that it is a basic budget offering from a top-tier international airline, the MIKO-X7 will be a
