Electrophoretic separation of sialoglycoproteins. A procedure for electroelution of sialoglycoproteins from polyacrylamide gels has been developed. The methodology is based on the classical work of O'Farrell (1941) and Heemskerk et al. (1942). This method has been adapted to the use of affinity gels (fractionation by means of lectin-coated gels) in electrophoretic separation of sialoglycoproteins and in preparative electroelution of sialoglycoproteins. A Rare Case of Cortical Infarction in the Basal Ganglia. Cortical infarcts in the basal ganglia are generally associated with thalamic infarcts or pontine infarcts. However, there are a few reports about isolated cortical infarcts in the basal ganglia, especially in the substantia nigra. We report a rare case of a cortical infarction in the subthalamic nucleus (STN) with the simultaneous involvement of the caudate nucleus and putamen. A 64-year-old woman was admitted to our hospital with a 7-day history of upper extremity paresis. Brain magnetic resonance imaging (MRI) revealed a cortical infarction in the right STN with the involvement of the caudate nucleus and putamen. The cortical lesion was asymmetrically distributed. The periventricular region was not involved. After 24 months of follow-up, the patient's symptoms had completely recovered. Cortical infarcts in the STN are generally associated with thalamic infarcts or pontine infarcts. We found a rare case of a cortical infarction in the STN with the simultaneous involvement of the caudate nucleus and putamen
