Once you get the right workflow, the photo-editing tools are very powerful. The entire selection process uses smart technology to quickly and almost magically select and outline objects. It's hard to get a Photoshopping to be too complicated, and it's very easy to understand all that's available. All the tools in the Photo Editing group are available in the Styles tools, too, which let you craft a set of adjustments and presets. As a free paid application, Adobe makes these tools available even to those who don't own the entire package, so you can quickly retouch a photograph without buying Photoshop CS6. Most of the new features in Lightroom 5 are completely welcome. I won't discuss some of these new technologies in this article, because I'm putting less emphasis on software this time. Instead, I will evaluate the various new features of Lightroom, how useful they are, and what needs to be fixed by future updates. Some of the items I will cover in this review are obvious. Customer reviews of Lightroom and related software have been very positive. Others are a bit more subjective, and the verdict will be up to you. The new options can be adjusted on the fly while using the software, so you should see plenty of results to help you decide whether Lightroom is worth a purchase or not. The new focus on speed, too, will give you a solid base to make your own decisions based on.

When you update to the Photoshop beta, you'll notice some new features that allow you to layer multiple images side by side and make them easier to work with. In addition, you'll see controls that let you preview what a layer looks like as a mask in the image. This feature helps you make better decisions about adding color to the photo to differentiate between elements of an image. The update also makes it easier to use the Select & Livestack panel in Photoshop, and we've added new controls so you can quickly switch between levels of adjustment. And the update makes it even easier to view your images in real time, so you can make the changes you've been working on appear right away. We are excited to announce that the Photoshop Creative Cloud team will be showing the next evolution for the print features in Photoshop CC at the **Adobe MAX Print & Video Conference** on August 19-22, in San Jose, CA. With the release of the latest headlines, we'll share two new stage show presentations presented by Creative Director of Photoshop Fran Newell: The new feature for the year to come is the introduction of Layers Panel 2.0. As the name suggests, it aims to provide the Layers Panel with a fresher look, offering more intuitive groupings of Layers, better Insight into each grouping, and faster editing. Layers Panel 2.0 will be included with the November 2020 release

of Photoshop. If you use Layers Panel regularly, you will need to disable the plugin plug-in when updating.

Q: xampp Apache & RewriteRule in xampp I am trying to create a new page using the Apache with xampp. I want to do it on an existing.php file, so I did this: RewriteEngine on RewriteCond %{REQUEST\_FILENAME}!-f RewriteCond %{REQUEST\_FILENAME}!-d RewriteRule (.\*) index.php?url=\$1 [PT,L,QSA] I then put a! before the first line because it wasn't working. Now I can still get to.php files. Instead of just index.php?url=the-url-here I get the below results: for any.php, I get:  
index.php?url=index.php&url2=index.php2 How do I get rid of this? What file should be edited to make it so that with.php files I only get: index.php?url=the-url-here A: You don't need to put the! before the first line. If the RewriteRule is applied, it should not use the previous RewriteCond and RewriteRule.

Nurses' knowledge regarding prevention and identification of delirium: a survey of general practitioners and nurses in an internal medico-surgical unit. Delirium is a common occurrence in internal medicine and geriatric medicine and nursing home nurses. It is a serious complication that is associated with increased morbidity and mortality, extended hospital stays and increase health services cost. Delirium is frequently under-diagnosed by nurses and general practitioners. To assess how well nurses' know about prevention and identification of delirium. Descriptive, cross-sectional survey. A questionnaire was distributed by a medical student to 43 nurses working in an internal medicine ward at a French teaching hospital and to 45 nurses working at a university teaching hospital in Paris, France. A further sub-analysis was performed on final year nurses (n = 15), in order to assess the role nurses play in delirium prevention and to identify the limits of their knowledge. Nurses reported they were unsure or insufficiently informed regarding the prevention and identification of delirium. The final year graduate nurses felt that nurses' roles did not exceed the nurse-patient relationship. There is a gap between good practice and assessment of knowledge concerning delirium among nurses. Before prescribing care, and regardless of nurses' educational background or experience, we should know: how often nurses identify delirium, what are the most common causes of delirium, what are their most common indices, and how can we promptly confirm a diagnosis of delirium? Efforts should be made to improve nurses' knowledge about delirium in order to enhance the quality of care they provide. 06
