So, which is the best graphic design software? How about that'® Best App Ever award?

The answer lies in what type of graphic designer or photographer you are. For budding graphic designers, it depends on the kind of work you want to do. Lightroom can be tough to learn and takes a while to master. GIMP is great for your first graphic design efforts, given that it's free and relatively easy to learn. And for photographers, I'd suggest looking at Pixlr, a program designed for cropping, rotating and resizing your images. Photoshop gives you much more freedom of expression than even some of the highest-quality photo editors. Think of it this way: If you have an artist's pen and you draw on paper with the greatest skill, you're not going to get as much detail as if you were to spray paint a painting on a canvas. That's the way that digital cameras and photos work — and Photoshop lets you really tweak and bend the appearance of your images to the max. If the photograph you want was shot with a digital camera, for example, your first step is to open the image in Photoshop. Then, you'll go to the "Edit" menu and choose "Trim". Once you get your image straightened out, you'll likely want to boost those color levels, increase the contrast and tweak those colors. You can do a lot of that stuff in the Levels dialog. After that, you can go to the "Filters" menu and choose "Grain." That's Adobe's way of smoothing out the appearance of photographs... I have just come from the Black Hat Security Conference, which was full of hackers, Internet security freaks and cryptography crackers who want to make sure that your communications remain safe and private. Because this group is so hardcore, they were interested in and skeptical about most of the software surrounding the issue. e3d0a04c9c
