Do not include plugins in your Photoshop collection. Plugins can cause issues with other programs and plugins can also slow down Photoshop. I suggest setting up a separate folder for your plugins and place them in there. Along with making sure you keep Photoshop and plugins updated, keep them toned down to where they do not interfere with each other. This is very important because if Photoshop crashes and you are using a plugin that was being used at the time that it crashed, you will need to revert to the un-crashed version to get your work back. An LCD 24-inch monitor will not provide you the image quality that a LED 30″ monitor can. They can cost much less too. If you need a large monitor for working, then you need to make sure it is an AdobeRGB. There are many models and brands out there and they do not all have the same quality.
