While Lightroom 5 handles collections better than previous versions did, it's still not what we'd like to see. The collection workflow is good enough if you like this way of doing things. We get a good intention, but the collection window is still clumsy when compared to other systems that also support a central collection hierarchy. It makes sense for Lightroom to recreate the functionality of the import window, as the import window wasn't only created for Lightroom. However, it must erase the collection import window that already exists and reinvent it from scratch. I think I got used to it and am perfectly happy with the approach (well, I'd have liked to have seen a little more standardization between image collections and library collections). Unfortunately, I feel that we still don't have enough for the new features in this regard. These should be far more user friendly. A simple import window that has the proper up and down arrows would be perfectly fine. Instead, we have a system that's convoluted and misleading. Personal Note: Photoshop is the best program I have used so far. I feel new users of Photoshop should start with Lightroom 5. I already saved lot of my work in Lightroom 5 and it works fine with all my plugins, etc. Adobe has always insisted on creating the best photo editing software on the planet, a goal that it seems it hasn't lost. The newly released Photoshop CC 2014 has set a new standard, being both beautiful and powerful. It's also the most sophisticated version of Photoshop to date, with advanced features that enable us to edit, organize, and share our digital bests in new ways.

Every living organism and its habitat are the result of thousands of interactions between genes and environments. DNA codes for protein building blocks, which build and maintain cell structures. Within a cell, proteins are factories that carry out many of the processes needed to keep our bodies alive. Genes are the chemical codes for these proteins. The more we know about the molecular structure of DNA, the more we have understood about making life. But each step along the way has shattered this concept just a little bit, bringing us closer to understanding the code of life.
