Cracking Adobe Photoshop is a bit more involved, but it can be done. First, you'll need to download a program called a keygen. This is a program that will generate a valid serial number for you, so that you can activate the full version of the software without having to pay for it. After the keygen is downloaded, run it and generate a valid serial number. Then, launch Adobe Photoshop and enter the serial number. You should now have a fully functional version of the software. Just remember, cracking software is illegal and punishable by law, so use it at your own risk.

"That's rad!" you may be thinking, but, Lormel admits that it's not that simple. "To get feedback, you need a Mac, an iPad or a tablet computer, and, of course, Photoshop. At this point, you need to be on two computers, or have another person who will work on the document in tandem with you," he notes. "Since I have four kids at home, managing that is impossible. I am not one to organize and am probably a big pain to support as well." The new process is actually two-step review process. In the first step, you would simply create your artwork in Photoshop, and save or send that artwork into Share for Review. "You are in complete control of how far you want to go," says Lormel. "From here, the app can prepare the artwork for you to share with stakeholders – with or without a camera. It will create [a link to an] Adobe Cloud site in the app to share the artwork, which is '2-Step Review', meaning that the stakeholders need only connect the app to their own websites to get the file, but they can do it themselves or leave it to us," he adds. Next, you would share your artwork from Share for Review with recipients. To do this, you simply upload the artwork to Share for Review, which will also upload the artwork to Adobe Cloud site with a link to that artwork. This is where the second step comes in. Since the recipient is able to easily share the artwork, you can rest easy knowing that your feedback has been registered and that the recipient can use it to do what they want. This means they can choose not to use your feedback and send the file back to you and on and on. Maybe they need to send it off to the client and tweak it. No problem. In the end of the day, you have full control over this.
